

Assignment – 4.5

Name – Anushka Voorugonda

Batch - 29

2303A51176

Task 1: Suppose that you work for a company that receives hundreds of customer emails daily. Management wants to automatically classify emails into categories like "Billing", "Technical Support", "Feedback", and "Others" before assigning them to appropriate departments. Instead of training a new model, your task is to use prompt engineering techniques with an existing LLM to handle the classification.

PROMPT :

Classify the above below samples into one of the following categories: Billing, Technical Support, Feedback, Others.

Classify the above email samples into one of the following categories: Billing, Technical Support, Feedback, Others.Email: 'I have not received my invoice for last month.

Classify the below email samples into one of the following categories: Billing, Technical Support, Feedback, Others.Email: 'I have not received my invoice for last month. Billing, "Subject: Invoice #12345 Dear Customer, your invoice for the month of June is attached. Please make the payment by the due date. Best regards, Billing Team", "Technical Support", "Subject: Issue with Software Installation Hello Support Team, I am facing issues while installing the software on my computer. It shows an error code 404. Please assist. Thanks, User".

CODE and OUTPUT :

```
AI-4.5.py > classify_multiple_emails
1 #Management wants to automatically classify emails into categories like "Billing", "Technical Support", "Feedback", and "Others" before assigning them to a
2 #Create or collect 10 short email samples, each belonging to one of the 4 categories.
3 #Classify the above below samples into one of the following categories: Billing, Technical Support, Feedback, Others.''

Billing
['Billing', 'Technical Support']

Justification :

This task shows how prompt engineering can be used to sort emails automatically. Zero-shot prompting works for simple emails. But it may give wrong results when emails are unclear. One-shot and few-shot prompting help the model understand better by giving examples. This reduces manual work and saves time for the company.

Task 2: Travel Query Classification

A travel assistant must classify queries into Flight Booking, Hotel Booking, Cancellation, or General Travel Info.

Tasks:

- a. Prepare labeled travel queries.

- b. Apply Zero-shot prompting.
- c. Apply One-shot prompting.
- d. Apply Few-shot prompting.
- e. Compare response consistency.

PROMPT :

A travel assistant must classify queries into Flight Booking, Hotel Booking, Cancellation, or General Travel Info. Tasks: a. Prepare labeled travel queries.

Classify the travel query into one of the categories: Flight Booking, Hotel Booking, Cancellation, General Travel Info. "I need to book a flight to New York next week.",

Classify multiple travel queries into one of the categories: Flight Booking, Hotel Booking, Cancellation, General Travel Info. "I need to book a flight to New York next week.", "Can you help me find a hotel in Paris?"

Classify multiple travel queries into one of the categories: Flight Booking, Hotel Booking, Cancellation, General Travel Info. "Can you help me find a hotel in Paris?""I would like to cancel my reservation for tomorrow.", "What are the travel restrictions for Italy?""

CODE and OUTPUT :

```

○ PS D:\AI>

```

Justification :

Travel questions often look similar but have different meanings. Zero-shot prompting may confuse the intent. One-shot prompting gives a small example, so the model performs better. Few-shot prompting gives more examples and improves accuracy. This helps travel assistants give correct responses.

Task 3. Programming Question Type Identification

Scenario:

A coding help chatbot must classify queries into Syntax Error, Logic Error, Optimization, or Conceptual Question.

Tasks:

- a. Prepare coding-related user queries.
- b. Perform Zero-shot classification.
- c. Perform One-shot classification.
- d. Perform Few-shot classification.
- e. Analyze improvements in technical accuracy.

PROMPT :

A coding help chatbot must classify queries into Syntax Error, Logic Error, Optimization, or Conceptual Question. Tasks:
a. Prepare coding-related user queries.
b. Perform Zero-shot classification.
c. Perform One-shot classification.
d. Perform Few-shot classification.

CODE and OUTPUT :

```
191 #A coding help chatbot must classify queries into Syntax Error, Logic Error, Optimization, or Conceptual Question. Tasks:a. Prepare coding-related user qu
192 def classify_coding_query(query):
193     """Classify the coding query into one of the categories: Syntax Error, Logic Error, Optimization, Conceptual Question.

Category: Logic Error

Query: How can I optimize my code for better performance?
Category: Optimization

Query: Can you explain the concept of recursion in programming?
Category: Conceptual Question

○ PS D:\AI>
```

Justification :

Programming questions need correct technical understanding. Zero-shot prompting may mix up syntax and logic errors. One-shot prompting gives guidance with an example. Few-shot prompting improves accuracy by showing different question types. This helps the chatbot give better coding help.

Task 4. Social Media Post Categorization

Scenario:

A social media analytics tool must classify posts into Promotion, Complaint, Appreciation, or Inquiry.

Tasks:

1. Prepare sample social media posts.
2. Use Zero-shot prompting.
3. Use One-shot prompting.
4. Use Few-shot prompting.
5. Analyze informal language handling.

PROMPT :

Social Media Post Categorization, A social media analytics tool must classify posts into Promotion, Complaint, Appreciation, or Inquiry. 1. Prepare sample social media posts. 2. Use Zero-shot prompting. 3. Use One-shot prompting. 4. Use Few-shot prompting. 5. Analyze informal language handling.

CODE and OUTPUT :
